Forecast for Saturday 07 Dec 2024

Weather: Storm Darragh will bring storm-force winds to higher level though much of Saturday, with some locally severe gales even at lower levels. Multiple weather warnings in force. Heavy and persistent rain likely through the morning, turning to snow above 600-700m leading to a threat of blizzard conditions at height. Some early lulls in the wind are possible but these will only be short-lived as north-westerly winds will strengthen through the morning with outbreaks of rain, sleet or snow becomes increasingly showery with drier interludes into the afternoon and especially the evening.

Chance of cloud-free hill tops above 800m: 10% in the morning, but increasing to 80% into the afternoon.

Low Cloud and visibility: Overcast cloud with bases 300-400m will persist through much of the morning. Cloud will gradually lift and break, with bases increasingly around 700-900m into the afternoon. Poor or very poor visibility initially in low cloud and wintry precipitation. Visibility likely increasing through the afternoon, although remaining poor in any heavy showers and locally at height.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Conditions will be very poor as Storm Darragh moves through the area on Saturday. Met Office NSWWS weather warning are in place with a rare Red warning for Strong winds valid from 0300-1100 for much of the period and a wider Amber warning for Strong winds covering the region until 2100. Please consult the Met Office website for the latest updates. Some very serious conditions are likely at height with mobility almost impossible on exposed ground with a risk of being blown off your feet. This combined with a severe wind chill and some very poor visibility and blowing snow possible at height. Extreme caution should be exercised if heading onto the hills.

Forecast for Sunday 08 Dec 2024

Weather: Storm force winds over summits gradually ease to gale force, while gales at lower levels gradually ease. Brighter spells and showers. Showers wintry at height but dwindling later in day.

Maximum wind: Northerly 60-70mph gusting 80-90mph at height during the early hours, slowly easing through the day.

Chance of cloud-free hill tops above 800m: 80%.

Low Cloud and visibility: Broken cloud with bases 800-1000m through much of the day. Visibility generally good, although continuing to be poor at height.

Temperature: **Valleys:** Plus 4-6 Celsius.
At 800m: Plus 1-2 Celsius.
Freezing level: Freezing level between 800-1000m.
